# PART-I

## Brief history and past performance

## 1 (a) - Brief description of forest in the state

The State of West Bengal, located in the eastern part of India has a geographical area of 88,752 sq. km, which is 2.70% of the geographical area of the country. The State lies between 21°29'N to 27°13'N latitude and 85°50'E to 89°52' E longitude and shares international border with Bangladesh in the east, Nepal in the northwest and Bhutan in the northeast. The State is also bordered by Sikkim in the north, Assam in the east, Bihar & Jharkhand in the west and Odisha and the Bay of Bengal in the south. The State has two natural divisions viz. the North Himalayan and the south Alluvial Gangetic Plains.

The state of West Bengal has a recorded forest area of 11,879 sq km which constitutes 13.48% of the total geographical area of the state.

The forest areas are classified into three categories-

- (i) Reserved Forest with an area of 7054 sq. km.
- (ii) Protected forest with an area of 3772 sq. km &
- (iii) Unclassed State Forest with an area of 1053 sq. km.

The forest cover includes both notified forest area and Afforestation created outside forest and it constitutes 21.30% of the geographical area of the state (SFR-2019).

The distribution of vegetation in northern West Bengal varies with elevation and precipitation; the foothills of the Himalayas are densely wooded with Sal and other tropical evergreen trees. The forest becomes predominantly subtropical above 1,000 meters and above 1,500 meters temperate forest trees like Oaks, Conifers and Rhododendrons predominate. The forest of southwest Bengal is dry deciduous and major species in Sal and its associates. As per the Champion & Seth Classification of Forest Types (1968), the forests in West Bengal belong to eight Forest Type Groups, which are further divided into 30 Forest Types. West Bengal is one the pioneering States in implementing Joint Forest Management.

There are 11 territorial Circle in the state. The forest of northern part of the forest is enriched in bio diversity. There are 6 National Parks, 16 wildlife sanctuaries, 2 Tiger Reserve & 2 elephant reserves in the state. The Sundarban Biosphere Reserve is the only biosphere reserve and it is a UNESCO World Heritage Site.

The State supports approximately 7.54% of the population. The population density of the State with 1029 persons per sq. km is one of the highest in the country. The 19th Livestock Census 2012 has reported a total livestock population of 30.35 million. The demand of the huge population on the limited natural resources i.e. the land and forests exerts a tremendous negative impact on these resources.

The three main rivers of the northern part of the state viz. Teesta, Torsa and Jaldhaka are tributaries of river Brahmaputra. The rivers Ganga and Hooghly flowing through the central part of the State drain into the Bay of Bengal forming the famous Sundarbans. Climate varies from moist tropical in the southeast to dry tropical in the southwest and from subtropical to temperate in the mountains of north.

The annual rainfall ranges between 900 mm in Southwest to 5,000 mm in parts of the north. The annual temperature varies from sub-zero in the hills during the winter to about 46°C in southern parts during the summer.

**Part – (b) Compensatory Afforestation, other forestry and related schemes (physical and financial) including Catchment Area Treatment, Wildlife Management and community development works and activities carried out therein in the State in last five years from the State Fund, in tabular form.**
